stack

StackOS becomes the world's first to add real digital assets to NFTs.

NFTs are no longer just JPEGs.

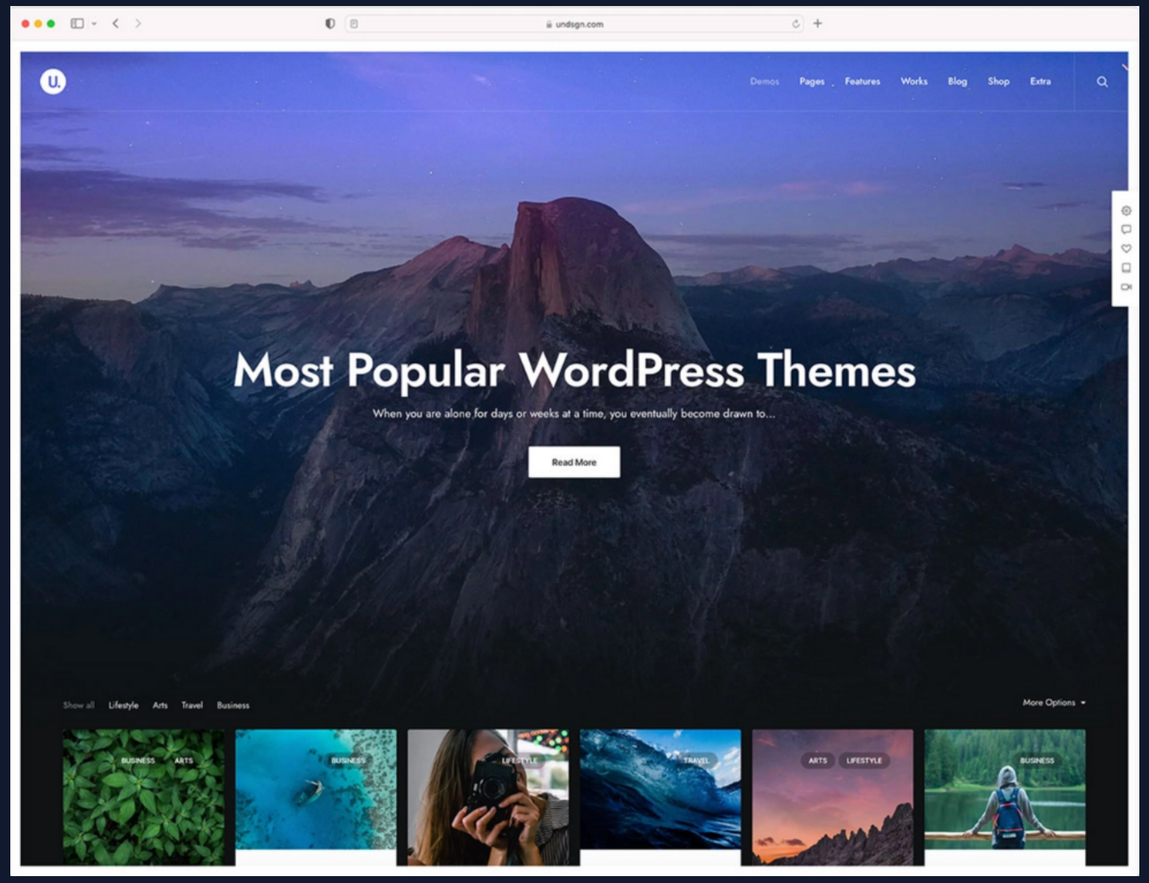
stack

It's an economy
of Creators, Developers
& End-users.

Developers can create different worlds. Gamers can build communities and sell the game servers.

stack

Theme creators can create a prebuilt theme on a WordPress NFT.



Users are moving to **Wix** and other platforms!

With StackOS, users can buy prebuilt WordPress NFTs and **simply pay** for compute and **start** their custom WordPress server.

stack

Developers can build blockchain validators, nodes, indexers etc. and sell them as NFTs.

Polygon

Avalanche

BSC

Reef

Neo

Polkadot

Many community members want to operate nodes but **don't have the expertise.**

With StackOS one can now **buy nodes as NFTs**, and just pay for the compute and mine rewards.

Everything in minutes!!!
